INDEX TO AUTHORS

Brackets indicate senior author's professional history

A

ALLEN, ROBERT D., BRAULT, JAMES, and MOORE, ROBERT D. A new method of polarization microscopic analysis. I. Scanning with a birefringence detection system, 223

AMOORE, J. E. Non-identical mechanisms of mitotic arrest by respiratory inhibitors in pea root tips and sea urchin eggs, 555

ANTHONY, WILLIAM. See TEDESCHI, JAMES, and ANTHONY, 503

B

BEAMS, H. W., and KESSEL, R. G. Electron microscope studies on developing crayfish oocytes with special reference to the origin of yolk, 621

BEHNKE, O. Demonstration of acid phosphatase–containing granules and cytoplasmic bodies in the epithelium of fetal rat duodenum during certain stages of differentiation, [483] 251

BIRNSTIEL, MAX L., and HYDE, BEAL B. Protein synthesis by isolated pea nucleoli, [219] 41

BONNEVILLE, MARY A. Fine structural changes in the intestinal epithelium of the bullfrog during metamorphosis, [709] 579

— and VOELLER, BRUCE R. A new cytoplasmic component of plant cells, 703

BOUCK, G. BENJAMIN. Stratification and subsequent behavior of plant cell organelles, 441

BRADBURY, S. See MEEK and BRADBURY, 73

BRAULT, JAMES. See ALLEN, BRAULT, and MOORE, 223

BROWN, A. D., and SHOREY, C. D. The cell envelopes of two extremely halophilic bacteria, [709] 681

BRYANT, B. J. Reutilization of lymphocyte DNA by cells of intestinal crypts and regenerating liver, [709] 515

C

CAMERON, IVAN L., and GREULICH, RICHARD C. Evidence for an essentially constant duration of DNA synthesis in renewing epithelia of the adult mouse, [219] 31

CAMPO, ROBERT D., and DZIEWIATKOWSKI, DOMINIC D. Turnover of the organic matrix of cartilage and bone as visualized by autoradiography, [219] 19

CHOULES, ELIZABETH A. See KECK and CHOULES, 459

COPELAND, D. E. See PHILPOTT and COPELAND, 389

D

DALES, SAMUEL. The uptake and development of vaccinia virus in strain L cells followed with labeled viral deoxyribonucleic acid, 51

DORFMAN, ALBERT. See THORP and DORFMAN, 13

DRUM, RYAN W. The cytoplasmic fine structure of the diatom, *Nitzschia palea*, [483] 429

DZIEWIATKOWSKI, DOMINIC D. See CAMPO and DZIEWIATKOWSKI, 19

E

EANES, E. D. See NYLEN, EANES, and OMNELL, 109

ENDERS, A. C., ENDERS, R. K., and SCHLAFKE, S. An electron microscope study of the gland cells of the mink endometrium, 405

ENDERS, R. K. See ENDERS, ENDERS, and SCHLAFKE, 405

EVANS, H. J., and SAVAGE, J. R. K. The relation between DNA synthesis and chromosome structure as resolved by x-ray damage, [710] 525

F

FAHRENBACH, WOLF. A contribution to glass knife breaking, 475

G

GAUTHIER, GERALDINE F. See PADYKULA and GAUTHIER, 87

GLAUERT, AUDREY M., KERRIDGE, D., and HORNE, R. W. The fine structure and mode of attachment of the sheathed flagellum of *Vibrio metchnikovii*, 327

GREULICH, RICHARD C. See CAMERON and GREULICH, 31

H

HERNDON, ROBERT M. The fine structure of the Purkinje cell, [219] 167

HOFFMAN, JOSEPH. See POST, HUANG, and HOFFMAN, 1

HORNE, R. W. See GLAUERT, KERRIDGE, and HORNE, 327

HUANG, CHENG-YA. See POST, HUANG, and HOFFMAN, 1

HYDE, BEAL B. See BIRNSTIEL and HYDE, 41

J

JAMES, JOSEPH M. See TEDESCHI, JAMES, and ANTHONY, 503

JORDAN, LIANE E. See MAYOR and JORDAN, 207

K

KARASAKI, SHUICHI. Studies on amphibian yolk. 1. The ultrastructure of the yolk platelet, [220] 135

—. See WALLACE and KARASAKI, 153

KECK, KONRAD, and CHOULES, ELIZABETH A. An analysis of cellular and subcellular systems which transform the species character of acid phosphatase in *Acetabularia*, [483] 459

KELLNER, A. See RICHTER and KELLNER, 195

KERRIDGE, D. See GLAUERT, KERRIDGE, and HORNE, 327

KESSEL, R. G. See BEAMS and KESSEL, 621

KODAMA, ROBERT M., and TEDESCHI, HENRY. An electron microscope study of calf thymus nuclear preparations isolated in sucrose solutions, [710] 541

L

LOUD, ALDEN V., and MISHIMA, YUTAKA. The induction of melanization in goldfish scales with ACTH, *in vitro*. Cellular and subcellular changes, 181

M

MACRAE, EDITH KRUGELIS. Observations on the fine structure of pharyngeal muscle in the planarian, *Dugesia tigrina*, [710] 651

MAGGIO, RACHELE, SIEKEVITZ, PHILIP, and PALADE, GEORGE E. Studies on isolated nuclei. I. Isolation and chemical characterization of a nuclear fraction from guinea pig liver, [484] 267

—, —, and —. —. II. Isolation and chemical characterization of nucleolar and nucleoplasmic subfractions, 293

MALAMED, SASHA. Use of a microcentrifuge for preparation of isolated mitochondria and cell suspensions for electron microscopy, [710] 696

WILSENACH, R. Differentiation of the chloroplast of *Anthoceros*, [485] 419

INDEX TO SUBJECTS

A

Acid phosphatase-containing granules, and cytoplasmic bodies, demonstration of in duodenal epithelium of fetal rat during differentiation, histochemical and microscopic study, 251
— phosphatase, in alga *Acetabularia*, analysis of cellular and subcellular systems which transform species character of, studied by means of graft combinations between cells, 459
Acridine orange, dynamics of interaction with cell (HeLa), interrelationships of dye particles and cytoplasmic reddening, studied by fluorescence microscopy, 237
Acrolein, fine structure fixative for viral cytochemistry, 207
Adenosine triphosphatases, localization of, in fibers of skeletal muscle of rat diaphragm, histochemical and EM study, 87
Adipose (brown) cell, metabolically active, in interscapular fat pad, of rat, cytolysomes in, EM study, 478
— (white) cell, in inguinal and epididymal fat pads, of newborn and young rats, differentiation of, EM study, 663
Alga, *Acetabularia*, analysis of cellular and subcellular systems which transform species character of acid phosphatase in, studied by means of graft combinations between cells, 459
Ameloblasts, during early stages of maturation of tooth enamel, of rat, ultrastructure of, 691
Amphibians, mature eggs and young embryonic cells of, ultrastructure of yolk platelets, 135

B

Bacteria, *Halobacterium halobium* and *H. salinarium*, fine structure of cell envelopes in sections and isolated, biochemical and EM analysis, 681
Bacterium, *Vibrio metchnikovii*, fine structure and mode of attachment of sheathed flagellum of, studied with negative staining, 327
Bean seedlings, *Vicia faba*, relation between DNA synthesis and chromosome structure in cells of root tips, as resolved by x-ray damage, autoradiographic study, 525
Birefringence detection system, scanning with, new method of polarization microscopic analysis, 223
Bone and cartilage, of suckling rats, turnover of organic matrix of, as visualized by autoradiography, 19

C

Calf, thymus, nuclear preparations isolated in sucrose solutions, biochemical and EM study, 541
Cartilage and bone, of suckling rats, turnover of organic matrix of, as visualized by autoradiography, 19
Cell, brown adipose, metabolically active, in interscapular fat pad, of rat, cytolysomes in, EM study, 478
—, chloride, in epithelium of gill filaments of three species of *Fundulus*, fine structure of, 389
—envelope, of *Halobacterium halobium* and *H. salinarium*, fine structure of, in sections and isolated, biochemical and EM analysis, 681
—, HeLa, study of dynamics of interaction between acridine orange and cell, interrelationships of dye particles and cytoplasmic reddening, studied by fluorescence microscopy, 237
—, liver, of rat, replication time and pattern of, in growing animal, autoradiographic study, 1
—, Purkinje, of rat cerebellum, fine structure of, 167
—suspensions, and isolated mitochondria, use of a microcentrifuge for preparation of for EM, 696
—, white adipose, in inguinal and epididymal fat pads, of newborn and young rats, differentiation of, EM study, 663
Cells, interstitial, and cnidoblasts, of *Hydra*, cytoplasmic microtubules in, EM study, 367
—, strain L, uptake and development of vaccinia virus in, followed with labeled viral DNA, studied by light and electron microscopy and autoradiography, 51
Cerebellum, of rat, fine structure of Purkinje cell in, 167
Chick embryo, suspensions of chondrocytes from tibia and femur, study of occurrence of intracellular chondroitin sulfate by means of radioactive sulfate, 13
Chloride cell, in epithelium of gill filaments of three species of *Fundulus*, fine structure of, 389
Chloroplasts, of moss *Anthoceros eckloni*, differentiation of, EM study, 419
Chondrocytes, of tibia and femur, of chick embryo, study of occurrence of intracellular chondroitin sulfate by means of radioactive sulfate, 13
Chondroitin sulfate, in chondrocytes, of tibia and femur, of chick embryo, study of occurrence of by means of radioactive sulfate, 13
Chromosome structure and DNA synthesis, relation between, in root tip cells of *Vicia faba*, as resolved by x-ray damage, autoradiographic study, 525
Cilia, of gill of mussel *Elliptio complanatus*, fixation of metachronal wave of, EM study, 345
Cnidoblasts, and interstitial cells of *Hydra*, cytoplasmic microtubules in, EM study, 367
Coelenterate, *Hydra*, cytoplasmic microtubules, in interstitial cells and cnidoblasts of, EM study, 367
Collagen (soluble), of earthworm cuticle, a possible dimer of tropocollagen, studied by means of flow birefringence, viscometry, polarimetry, and EM, 569
Crayfish, *Cambarus clarkii*, structure of myofilaments

in cheliped muscle, as shown by negative staining, EM study, 213
Crayfish, *Cambarus* and *Orconectes* sp., EM studies on developing oocytes, with special reference to origin of yolk, 621
Crypt, epithelium, in small intestine, of fasting humans, obtained by peroral biopsy of mucosa, EM study, 599
Cryptorchidism, experimental, in rat, fine structural changes in flagellum of spermatid, 337
Crystal growth, in rat tooth enamel during mineralization, x-ray diffraction and EM study, 109
Crystal-matrix relationships, in shell of mussel *Elliptio complanatus*, decalcification of thin sections for EM studies on, 701
Cuticle, collagen (soluble), of earthworm, a possible dimer of tropocollagen, studied by means of flow birefringence, viscometry, polarimetry, and EM, 569
Cytolysomes, in metabolically active brown adipose cells, in interscapular fat pad, of rat, EM study, 478
Cytoplasm, of diatom, *Nitzschia palea*, fine structure of, 429
Cytoplasmic bodies and acid phosphatase–containing granules, demonstration of in duodenal epithelium of fetal rat during differentiation, histochemical and microscopic study, 251
Cytoplasmic component, new, membrane system, in sucker hyphal cells of dodder plant *Cuscuta campestris*, EM study, 703

D

Decalcification, of thin sections, for EM studies of crystal-matrix relationships in shell of mussel *Elliptio complanatus*, 701
Desmosome, in cells of secretory tubules of submaxillary gland, of rat, analysis (shape, size, orientation) of by histometric and densitometric methods, EM study, 125
Diatom, *Nitzschia palea*, fine structure of cytoplasm of, 429
DNA, of lymphocyte, reutilization of by cells of intestinal crypts and regenerating liver, of mouse, autoradiographic study, 515
— synthesis, and chromosome structure, relation between, in root tip cells of *Vicia faba*, as resolved by x-ray damage, autoradiographic study, 525
— synthesis, evidence for in enucleated eggs of frog *Rana pipiens*, biochemical study, 471
— synthesis, in renewing epithelia of adult mouse, evidence for essentially constant duration of, autoradiographic study, 31
—, viral, labeled, used in tracing uptake and development of vaccinia virus in strain L cells, studied by light and electron microscopy and autoradiography, 51
Dodder plant, *Cuscuta campestris*, new cytoplasmic component (membrane system) of sucker hyphal cells, EM study, 703
Duodenum, epithelium of, in fetal rat, demonstration of acid phosphatase–containing granules and cytoplasmic bodies in during differentation, histochemical and microscopic study, 251

E

Earthworm, soluble cuticle collagen, a possible dimer of tropocollagen, studied by means of flow birefringence, viscometry, polarimetry, and EM, 569
Eggs, enucleated, of frog *Rana pipiens*, evidence for synthesis of DNA, biochemical study, 471
—, sea urchin, and pea root tips, non-identical mechanisms of mitotic arrest by respiratory inhibitors, biochemical study, 555
Embryo, of chick, suspensions of chondrocytes from tibia and femur, study of occurrence of intracellular chondroitin sulfate by means of radioactive sulfate, 13
Enamel, of rat tooth, crystal growth during mineralization, x-ray diffraction and EM study, 109
—, of rat tooth, ultrastructure of ameloblasts during early stages of maturation of, 691
Endometrium, gland cells of, in mink, during various stages of implantation, EM study, 405
Envelope, cell, of *Halobacterium halobium* and *H. salinarium*, fine structure of, in sections and isolated, biochemical and EM analysis, 681
Enzyme, acid phosphatase, in alga *Acetabularia*, analysis of cellular and subcellular systems which transform species character of, studied by means of graft combinations between cells, 459
—, thiamine pyrophosphatase, localization of in Golgi apparatus of ovotestis of mollusc *Helix aspersa*, histochemical and light and electron microscope study, 73
Enzymes, adenosine triphosphatases, localization of in fibers of skeletal muscle of rat diaphragm, histochemical and EM study, 87
Epithelia, renewing, of adult mouse, evidence for essentially constant duration of DNA synthesis in, autoradiographic study, 31
Epithelium, duodenal, of fetal rat, demonstration of acid phosphatase–containing granules and cytoplasmic bodies in during differentiation, histochemical and microscopic study, 251
—, intestinal, of frog *Rana catesbeiana*, fine structural changes in during metamorphosis, 579
—, of crypts in small intestine, of fasting humans, obtained by peroral biopsy of mucosa, EM study, 599
—, of gill filaments, of three species of *Fundulus*, fine structure of chloride cell in, 389

F

Fibrils, of flagellum, in rat sperm, ultrastructure of, studied with negative staining, 313
Fish, black moor and xanthic goldfish, *Carassius auratus* L., induction of melanization in scales by ACTH *in vitro*, cellular and subcellular changes, light and electron microscope study, 181
—, three species of *Fundulus*, fine structure of chloride cells in epithelium of gill filaments of, 389
Fixation, of metachronal wave, of gill cilia, in mussel *Elliptio complanatus*, EM study, 345
—, with acrolein, of fine structure, for viral cytochemistry, 207

Flagellum, of rat sperm, ultrastructure of fibrils of, studied with negative staining, 313
—, of rat spermatid, fine structural changes in during experimental cryptorchidism, 337
—, sheathed, of bacterium *Vibrio metchnikovii*, fine structure and mode of attachment of, studied with negative staining, 327
Frog, *Rana catesbeiana*, fine structural changes in intestinal epithelium during metamorphosis, 579
—, *Rana pipiens*, enucleated eggs of, evidence for synthesis of DNA, biochemical study, 471
—, *Rana pipiens*, isolation of yolk platelets from eggs of, 153

G

Gill, cilia of, in mussel *Elliptio complanatus*, fixation of metachronal wave of, EM study, 345
— filaments, of three species of *Fundulus*, fine structure of chloride cell in epithelium of, 389
Golgi apparatus, localization of thiamine pyrophosphatase activity in, of ovotestis of mollusc *Helix aspersa*, histochemical study with light and electron microscopy, 73
Guinea pig, liver, isolation and chemical characterization of a nuclear fraction, biochemical and EM study, 267
— pig, liver, isolation and chemical characterization of nucleolar and nucleoplasmic subfractions of nuclear fraction, biochemical and EM study, 293

H

Heart muscle, of human, analysis of and two postulates concerning hypertrophy, EM study, 195
—, rabbit, swelling-shrinkage mechanisms in intact mitochondria, size and shape transformations correlated with oxidative phosphorylation in isolated mitochondria, 487
HeLa cell, study of dynamics of interaction between acridine orange and cell, interrelationships of dye particles and cytoplasmic reddening, studied by fluorescence microscopy, 237
Human, fasting, small intestine of, fine structure of crypt epithelium obtained by peroral biopsy of mucosa, 599
—, heart muscle, analysis of and two postulates concerning hypertrophy, EM study, 195

I

Intestinal crypts, and regenerating liver, of mouse, reutilization of lymphocyte DNA by cells of, autoradiographic study, 515
— epithelium, of frog *Rana catesbeiana*, fine structural changes in during metamorphosis, 579
Intestine, small, of fasting humans, fine structure of crypt epithelium obtained by peroral biopsy of mucosa, 599

K

Knives, glass, method of breaking, for electron microscopy, 475

L

Liver cell, of rat, replication time and pattern of, in growing animal, autoradiographic study, 1
—, of guinea pig, isolation and chemical characterization of a nuclear fraction, biochemical and EM study, 267
—, of guinea pig, isolation and chemical characterization of nucleolar and nucleoplasmic subfractions of nuclear fraction, biochemical and EM study, 293
—, of rat, evidence for osmotic behavior of microsomes in suspension, photometric study, 503
—, rat, structural changes in mitochondrial membrane fragments, size and shape transformations correlated with oxidative phosphorylation in isolated mitochondria, 495
—, regenerating, and intestinal crypts, of mouse, reutilization of lymphocyte DNA by cells of, autoradiographic study, 515
Lymphocyte DNA, reutilization of by cells of intestinal crypts and regenerating liver, of mouse, autoradiographic study, 515

M

Melanization, induction of by ACTH *in vitro*, in scales of black moor and xanthic goldfish, *Carassius auratus* L., cellular and subcellular changes, light and electron microscope study, 181
Membrane, cell, of *Halobacterium halobium* and *H. salinarium*, fine structure of, in sections and isolated, biochemical and EM analysis, 681
— system, new cytoplasmic component, in sucker hyphal cells of dodder plant *Cuscuta campestris*, EM study, 703
Metamorphosis, of frog *Rana catesbeiana*, fine structural changes in intestinal epithelium during metamorphosis, 579
Microcentrifuge, use of in preparation of isolated mitochondria and cell suspensions for EM, 696
Microscopy, polarization, new method of analysis with, scanning with birefringence detection system, 223
Microsomes, in suspension, of rat liver, evidence for osmotic behavior of, photometric study, 503
Microtomy, for electron microscopy, method of breaking glass knives, 475
Microtubules, cytoplasmic, in interstitial cells and cnidoblasts of *Hydra*, EM study, 367
Mink, endometrium, gland cells during various stages of implantation, EM study, 405
Mitochondria, isolated, and cell suspensions, use of a microcentrifuge for preparation of for EM, 696
—, isolated, size and shape transformations correlated with oxidative phosphorylation in, structural changes in mitochondrial membrane fragments, 495
—, isolated, size and shape transformations correlated with oxidative phosphorylation in, swelling-shrinkage mechanisms in intact mitochondria, 487
Mitosis, arrest by respiratory inhibitors, non-identical mechanisms of, in pea root tips and sea urchin eggs, biochemical study, 555

Mollusc, *Helix aspersa*, localization of thiamine pyrophosphatase activity in Golgi apparatus of ovotestis, histochemical and light and electron microscope study, 73
Moss, *Anthoceros eckloni*, differentiation of chloroplasts of, EM study, 419
Mouse, adult, renewing epithelia, evidence for essentially constant duration of DNA synthesis in, autoradiographic study, 31
—, cells of intestinal crypts and regenerating liver, reutilization of lymphocyte DNA by, autoradiographic study, 515
Muscle, heart, of human, analysis of and two postulates concerning hypertrophy, EM study, 195
—, pharyngeal, of planarian worm *Dugesia tigrina*, observations on fine structure of, 651
—, skeletal, of rat diaphragm, localization of adenosine triphosphatases in fibers of, histochemical and EM study, 87
Mussel, *Elliptio complanatus*, decalcification of thin sections for EM studies on crystal-matrix relationships in shell of, 701
—, *Elliptio complanatus*, fixation of metachronal wave of gill cilia, EM study, 345
Myofilaments, in cheliped muscle, of crayfish *Cambarus clarkii*, structure of, as shown by negative staining, EM study, 213

N

Nerve cell, Purkinje, of rat cerebellum, fine structure of, 167
Nuclei, from guinea pig liver, isolation and chemical characterization of a nuclear fraction, biochemical and EM study, 267
—, from guinea pig liver, isolation and chemical characterization of nucleolar and nucleoplasmic subfractions of nuclear fraction, biochemical and EM study, 293
—, isolated, from calf thymus, nuclear preparations in sucrose solutions, biochemical and EM study, 541
Nucleoli, isolated, of pea seedlings, study of protein synthesis in, studied by means of L-leucine-C^{14} incorporation, 41

O

Oocytes, of crayfish, *Cambarus* and *Orconectes* sp., EM studies on, with special reference to origin of yolk, 621
Organelles, of plant cells, stratification and subsequent behavior of, in pea root tips, EM study, 441
Osmotic behavior, of microsomes in suspension, from rat liver, evidence for, photometric study, 503

P

Pea, root tips, and sea urchin eggs, non-identical mechanisms of mitotic arrest by respiratory inhibitors, biochemical study, 555
—, root tips, stratification and subsequent behavior of plant cell organelles, EM study, 441
— seedlings, protein synthesis by isolated nucleoli of, studied by means of L-leucine-C^{14} incorporation, 41
Pharynx, muscle of, in planarian worm *Dugesia tigrina*, observations on fine structure, 651
Phosphorylation, oxidative, correlated with size and shape transformations in isolated mitochondria, structural changes in mitochondrial membrane fragments, 495
—, oxidative, correlated with size and shape transformations in isolated mitochondria, swelling-shrinkage mechanisms in intact mitochondria, of rabbit heart, 487
Planarian worm, *Dugesia tigrina*, observations on fine structure of pharyngeal muscle, 651
Platelets, yolk, in mature eggs and young embryonic cells, of amphibians, ultrastructure of, 135
—, yolk, isolation of, from eggs of frog *R. pipiens*, 153
Polarization microscopy, new method of analysis with, scanning with birefringence detection system, 223
Protein synthesis, by isolated nucleoli of pea seedlings, studied by means of L-leucine-C^{14} incorporation, 41

R

Rabbit, heart, swelling-shrinkage mechanisms in intact mitochondria, size and shape transformations correlated with oxidative phosphorylation in isolated mitochondria, 487
Radioactive label, H^3-thymidine, autoradiographic study of reutilization of lymphocyte DNA by cells of intestinal crypts and regenerating liver, of mouse, 515
— label, H^3-thymidine, in autoradiographic study of relation between DNA synthesis and chromosome structure, in root tip cells of *Vicia faba*, as resolved by x-ray damage, 525
— label, L-leucine-C^{14}, incorporation into isolated nucleoli, of pea seedlings, study of protein synthesis, 41
— label, S^{35}-sulfate, in study of occurrence of intracellular chondroitin sulfate, in chondrocytes of tibia and femur, of chick embryo, 13
— label, thymidine-H^3, incorporation in viral DNA, autoradiographic study of uptake and development of vaccinia virus in strain L cells, 51
— label, thymidine-H^3, in study of DNA synthesis in renewing epithelia of adult mouse, autoradiographic study, 31
— label, thymidine-H^3, in study of replication time and pattern of liver cell in growing rat, autoradiographic study, 1
— labels, C^{14}-L-phenylalanine, C^{14}-L-leucine, S^{35}-sulfate, $Ca^{45}Cl_2$, in study of turnover of organic matrix of cartilage and bone, of suckling rats, as visualized by autoradiography, 19
Rat, cerebellum, fine structure of Purkinje cell in, 167
—, fetal, demonstration of acid phosphatase–containing granules and cytoplasmic bodies in duodenal epithelium, during differentiation, histochemical and microscopic study, 251
—, interscapular fat pad, cytolysomes in metabolically active brown adipose cells, EM study, 478

Rat, liver cell, replication time and pattern of, in growing animal, autoradiographic study, 1
—, liver, evidence for osmotic behavior of microsomes in suspension, photometric study, 503
—, liver, structural changes in mitochondrial membrane fragments, size and shape transformations correlated with oxidative phosphorylation in isolated mitochondria, 495
—, newborn and young, inguinal and epididymal fat pads, differentiation of white adipose cells, EM study, 663
—, secretory tubules of submaxillary gland, analysis of desmosomes (shape, size, orientation) in cells of, by histometric and densitometric methods, EM study, 125
—, skeletal muscle of diaphragm, localization of adenosine triphosphatases in fibers of, histochemical and EM study, 87
—, sperm, ultrastructure of fibrils of flagellum, studied with negative staining, 313
—, spermatid, fine structural changes in flagellum in experimental cryptorchidism, 337
—, tooth enamel, crystal growth during mineralization, x-ray diffraction and EM study, 109
—, tooth enamel, ultrastructure of ameloblasts during early stages of maturation of, 691
Rats, suckling, turnover of organic matrix of cartilage and bone, as visualized by autoradiography, 19
Root tips, of pea, stratification and subsequent behavior of plant cell organelles, EM study, 441
— tips, of *Vicia faba*, relation between DNA synthesis and chromosome structure in cells of, as resolved by x-ray damage, autoradiographic study, 525
— tips, pea, and sea urchin eggs, non-identical mechanisms of mitotic arrest by respiratory inhibitors, biochemical study, 555

S

Scales, of black moor and xanthic goldfish *Carassius auratus* L., induction of melanization in by ACTH *in vitro*, cellular and subcellular changes, light and electron microscope study, 181
Sea urchin eggs, and pea root tips, non-identical mechanisms of mitotic arrest by respiratory inhibitors, biochemical study, 555
Shell, of mussel *Elliptio complanatus*, decalcification of thin sections for EM studies on crystal-matrix relationships in, 701
Sperm, of rat, ultrastructure of fibrils of flagellum, studied with negative staining, 313
Spermatid, of rat, fine structural changes in flagellum in experimental cryptorchidism, 337
Staining, with acridine orange, study of dynamics of interaction between dye and cell (HeLa), interrelationships of dye particles and cytoplasmic reddening, studied by fluorescence microscopy, 237
Submaxillary gland, secretory tubules of, in rat, analysis of desmosomes (shape, size, orientation) in cells of, by histometric and densitometric methods, EM study, 125

T

Thiamine pyrophosphatase activity, localization of, in Golgi apparatus of ovotestis of mollusc *Helix aspersa*, histochemical study, light and electron microscopy, 73
Thymus, of calf, nuclear preparations isolated in sucrose solutions, biochemical and EM study, 541
Tooth enamel, of rat, crystal growth during mineralization, x-ray diffraction and EM study, 109
— enamel, of rat, ultrastructure of ameloblasts during early stages of maturation of, 691

V

Viral cytochemistry, use of acrolein as fine structure fixative for, 207
Virus, vaccinia, uptake and development of, in strain L cells, followed with labeled viral DNA, studied by light and electron microscopy and autoradiography, 51

W

Wave, metachronal, of gill cilia, in mussel *Elliptio complanatus*, fixation of, EM study, 445

Y

Yolk, in developing oocytes, of crayfish *Cambarus* and *Orconectes* sp., with special reference to origin of, EM studies on, 621
— platelets, in mature eggs and young embryonic cells, of amphibians, ultrastructure of, 135
— platelets, isolation of, from eggs of frog *R. pipiens*, 153
